2-Factor Authentification - extension

- **Password + E-Mail:** After entering the password, an E-Mail with an access code will be sent
- **Password + Speech:** After entering the password, a call is made to the specified telephone number (landline or mobile) and the access code is announced by a computer voice
 License free feature for mbCONNECT24

Text2Speech

Alarm notifications by telephone call

Provides an alarm notification service by telephone call. The user-defined texts are converted by the system into a voice message. The procedure is similar to SMS or E-Mail alarm notification and can be found in the alarm-profile-settings.

- It is a telephone call and the announcement is repeated once
- The language follows the user's profile setting (GER, EN, FR, ES, NL)
- For each mbCONNECT24-Account there are 10 Telephone calls for free, extensions through licenses according to Price list
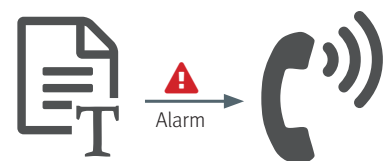

mbCONNECT24: Available as Text2Speech package, 250 calls
mymbCONNECT24: Available as Text2Speech package, 250 calls or as a separate Text2Speech.gateway
(Using the Text2Speech.gateway requires an appropriate license for mymbCONNECT24 and a customer account at the Text2Speech-Provider www.messsagebird.com)

Temporary user

- Assignment of a specific schedule to login
- Assignment of a certain number of logins

 License free feature for my/mbCONNECT24

LDAP-Connector

Centralized password control via ActiveDirectory

The password will be transferred via LDAP (Lightweight Directory Access Protocol) e.g. to the Windows ActiveDirectory service, which will give the release for the login. The benefit of this feature is that the password management is handled centrally for all applications on the Windows domain. However, the users and their rights still need to be created on the my/mbCONNECT24 Server.

mbCONNECT24: License with an annual fee required
mymbCONNECT24: License with a one-time fee required

Active Directory
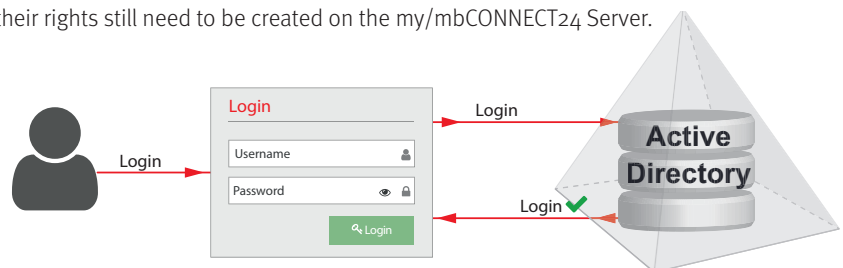

Change History - User log

All changes which have been performed by a user in the Remote-Service-Portal are documented.
It is displayed and logged:

- who performed the change - **Name**
- when the change was made - **Date + Time**
- what **Type** of change (Users, Devices, System settings, Projects, Scaling, Logging, Alarming, Services and Interfaces)
- which **Action** has been performed

User Language

With portal version 2.2.1, Spanish and Dutch are available as additional languages for a user profile.
